Kenesh Isakov

* Node.js | TypeScript *
Bishkek, Bishkek City, Kyrgyzstan

Summary

As a passionate Junior Back End Web Developer, I thrive on turning complex problems into elegant solutions. With a solid foundation in coding and a keen interest in system architecture, I am dedicated to building efficient, scalable back-end systems that drive seamless user experiences.

I have hands-on experience with Node.js, TypeScript, Express.js, PostgreSQL, MongoDB, AWS, Socket.io and many more key technologies. My recent project have involved an automation microservice development using Playwright, where I honed my skills in database design, server-side logic, version control and authorization system development. In our app we used Playwright as our main tool for automation. The app took screenshots that were then sent to our MongoDB database, uploaded via signed link to AWS S3 service and tied to user account that was stored in our main db - Postgres. All of the communications were made using websocket service Socket.io. We also built a message queue using BullMQ.

Driven by a curiosity for learning and a commitment to continuous improvement, I am eager to contribute to innovative projects and collaborate with talented teams. Feel free to contact me at any time! :-)

Experience

OmegaSoft Starup
Back End Developer
August 2023 - October 2024 (1 year 3 months)
Bishkek City, Kyrgyzstan

Developed most of back-end logic and operations

Worked on and managed databases

Wrote an authentication system
